Continuously manage

Manage all your menus, services, products and promotions that are available on your customer app using the Storefront UI.

- Create custom categories
- Create custom networks
- Dynamic pricing and delivery rates
- Payment gateway and check out options

Integrated to delivery operations

As standard, your web and mobile apps will be integrated into FleetOps. This means when an order is generated by your customer this will automatically generate an order in FleetOps. Manage your delivery operations in real time.

Integrated to drivers

Once your customers complete and order and this is assigned to your drivers. They can use the Fleetbase navigator mobile app to complete their delivery process using electronic activity status updates and electronic proof of delivery.
