

API-first logistics infrastructure for developers
and businesses

Product Deck

Challenges In Logistics

- **Lack of modern logistics operations systems results in:**
 - Inefficient management and operations
 - Business environment reliant on manual processes
 - Failure for service providers to adopt technology
- **No API driven platforms or developer ecosystems which results in:**
 - Large logistics companies failing to innovate
 - Extremely high development cost and long timelines
 - Abandoned innovative ideas and projects

Fleetbase

We provide logistics infrastructure to enhance operational flows and system development processes.

fleetbase.io

FleetOps - Multipurpose last mile logistics operation system and routing engine

Developers Console - Build, test & debug supply chain applications & integrations

Storefront - Ecommerce back end store and customer order portal

Consulting - Consulting services for logistics, supply chain and shipping companies

FleetOps Order Configuration - TMS For Any Delivery Flow

Create custom order fields

Pre set custom delivery activity status updates

Create and save order flows for processes such as 'Haulage' or 'Food Delivery' operations

The screenshot displays the 'Orders Configuration' interface. At the top, there's a 'Done' button and the title 'Orders Configuration'. Below this, a descriptive text states: 'Order configurations allow you to define dynamic configurations which will tell Fleetbase how different types of orders should be executed.' A 'Configuration' tab is active. A search bar prompts the user to 'Select an order configuration to modify, or click "New Config" to create a new order configuration.' A '+ New Config' button is to the right. Below the search bar, a dropdown menu shows 'Parcel Delivery'. To its right is a '+ Save Changes' button. Below the dropdown, there are tabs for 'Details', 'Custom Fields', 'Activity Flow' (which is selected), and 'Entities'. The 'Activity Flow' section has a '+ New Status' button. A descriptive text explains: 'Activity flow configuration will allow you to define the different types of tracking status activities that apply for this order type. Logic of the activity flow can also be configured.' Below this, there are tabs for 'Order Flow' and 'Waypoint Flow'. A '+ Created' notification and a '+ New Activity' button are visible. The 'Activity Details' section has a table with columns 'Status', 'Code', and 'Details'. The first row contains 'Order dispatched', 'dispatched', and 'Order has been dispatched to driver'. Below this is a 'Logic Stack' section with a '+ Add logic condition' button and a message 'No logic conditions applied'. A 'Remove activity' link is in the top right of the activity details section.

Done Orders Configuration

Order configurations allow you to define dynamic configurations which will tell Fleetbase how different types of orders should be executed.

Configuration

Select an order configuration to modify, or click "New Config" to create a new order configuration. + New Config

Parcel Delivery + Save Changes

Details Custom Fields Activity Flow Entities

Activity Flow + New Status

Activity flow configuration will allow you to define the different types of tracking status activities that apply for this order type. Logic of the activity flow can also be configured.

Order Flow Waypoint Flow

+ Created + New Activity

Activity Details Remove activity

Status	Code	Details
Order dispatched	dispatched	Order has been dispatched to driver

Logic Stack + Add logic condition

No logic conditions applied

FleetOps Order Scheduling

The screenshot displays the FleetOps Scheduler interface. On the left is a sidebar with navigation links: Dashboard, Orders, Scheduler, Service Rates, Zones, Drivers, Vehicles, Fleets, Vendors, Contacts, Places, Fuel Reports, and Issues. The main area is titled 'Scheduler' and contains a list of orders under the 'Orders' section. The orders are categorized into 'Unscheduled Orders' (11) and 'Scheduled Orders' (5). The first scheduled order, '@order_q7xpzJB' (UL138958), is expanded, showing its details: 'Date scheduled' (Wed May 5th 2021 12:00 AM), 'Date created' (Wed May 5th 2021 03:20 PM), and a list of four locations: MARINA BAY SANDS, PAYA LEBAR SQUARE, RONS HOUSE, and SHIV HQ. Below this, another order '@order_rDwnaee' (UL133641) is partially visible, showing its scheduled date (Wed May 19th 2021 12:00 AM) and locations. A third order '@order_g124Dxp' (UL513870) is also visible, scheduled for Fri May 14th 2021 12:00 AM. To the right of the order list is a calendar view for June 2021. A callout box on the right explains the drag-and-drop functionality for scheduling orders into the calendar.

Developer Console

Do more than integrate, build the next generation of logistics apps faster and more secure.

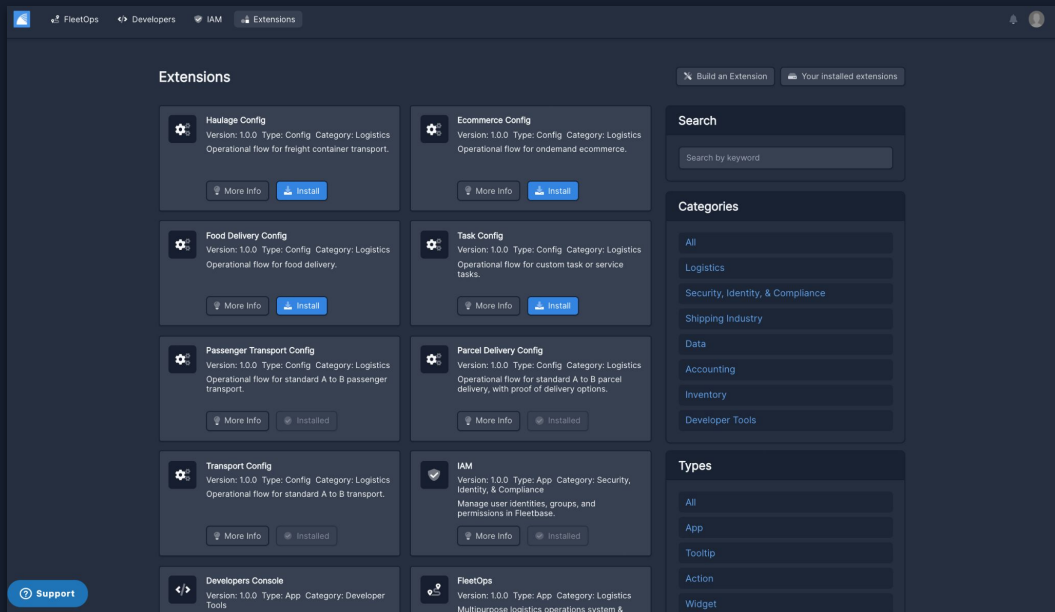

- Real-time first
- Eventful resources via webhooks
- Instant sandbox
- Metrics & analytics
- Advanced logging
- REST principles
- SDK & Libraries
- Open API & Swagger

Extensions

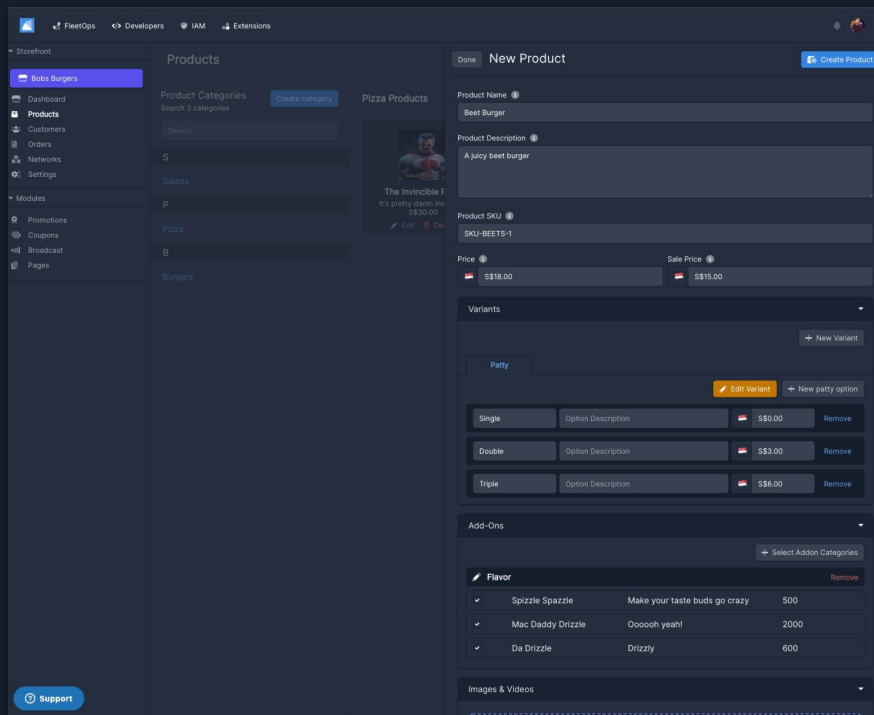

Fleetbase allows users to build their own feature extensions and plug them into the Fleetbase console.

- Install delivery order flows
- Additional features
- Additional services
- Widgets
- 3rd Party Integrations

Fleetbase Storefront

Build & manage your ecommerce store and customer order portal using Fleetbase Storefront.

- Ecommerce API layer for Fleetbase
- Open source consumer app
- Ability to use e-commerce layer API
- Create multi-tenant storefronts with "networks"
- Last mile integration by default

Pricing
